

COMMUNITY ENGAGEMENT OPPORTUNITIES

COMMUNITY CREW EVENT

As construction of the Groundwater Extraction & Treatment System (GETS) begins in visible ways, we want you to be able to see the work first-hand. We are planning to offer another “Community Crew” event that will provide an **in-person look at the GETS construction in progress.**

There are three key parts of the GETS under construction right now.

- **The Treatment Building**, where the groundwater will be treated, is being built on Tyco property.
- **The extraction wells**, which will extract the groundwater before it reaches Ditch B, are being installed in road right-of ways, on Tyco property, and along the new Access Road along Ditch B. Vaults that house the wells are also being constructed.
- **The conveyance piping** that connects the wells and transports the extracted water to the Treatment Building is now under construction. Work involves horizontal drilling along road right-of ways, on Tyco property and on the new Access Road along Ditch B.

Because construction schedules and project items often change, it is hard to guarantee which aspect of the three key parts of the GETS will be featured on the day of the Community Crew event. So, we are setting the date now and will advise on specifics closer to the date. Given that safety is a top priority and we don't want to interfere with traffic, the event will be held on Tyco property.

JOIN US!

Thursday, October 28 at Noon

Final location will be communicated the day before the event.

You can **sign up now** by filling out the form on the Contact Us tab at TycoMarinette.com and mention “Community Crew” in your note or call 715-582-7100. We will do our best to accommodate everyone who signs up, but spots will be filled on a first-come/first-served basis. Those who express interest will be given the details the day before the event.
